# PGY2 Infectious Diseases Residency

## About Legacy Health

Legacy Health, a leading health care organization and the largest nonprofit, locally owned health care provider serving the Portland, Oregon, and Southwest Washington area, has a mission to create a legacy of health for our people, our patients, our community and our world.

Legacy Health consists of two tertiary care teaching hospitals and a children's hospital in central Portland; three community hospitals in surrounding areas; and a hospital in Silverton, Oregon. Legacy also has multiple outpatient primary and specialty clinics, urgent care centers, a 24-hour behavioral health center (in collaboration with health partners) and a research facility.

The pharmacy departments provide decentralized patient care, including collaborative drug therapy protocol management with a strong presence in all clinical areas within Legacy. Legacy has over 100 ambulatory clinics and 20 primary care clinics with clinical pharmacists embedded in 14 of these clinics.

Legacy Emanuel Medical Center

### Program description

Legacy Health is proud to offer one position for a one-year PGY2 specialty residency in infectious diseases and antimicrobial stewardship.

Through the course of the year, this program will mentor the resident to build on the foundation of knowledge and skills achieved in their prior experiences to develop expertise in infectious diseases pharmacotherapy while also teaching skills sought after in today's job market.

The core experiences include the infectious diseases consultative services, who care for a spectrum of patient populations throughout the health system, antimicrobial stewardship, microbiology and molecular diagnostics, teaching, research, and informatics. A variety of elective experiences are available, promoting flexibility in accordance to the resident's goals, strengths and needs.

The residents will have teaching opportunities with multidisciplinary audiences and the opportunity to precept pharmacy students and PGY1 residents. Residency expectations include a research project focusing on the establishment, expansion or evaluation of an ambulatory patient care service.

A pharmacist completing this residency will be well prepared to assume a clinical position and academic settings. In addition, residents will be eligible for attainment of board certification in ID practice.

### Required learning experiences:

- Orientation
- Operations (staffing)
- Research project
- Practice management
- General infectious diseases
- Advance Infectious diseases 1 and 2
- Elective learning experiences
- Ambulatory clinic — infectious diseases
- Antimicrobial stewardship
- Infectious Diseases Clinic

### Elective learning experiences:

- Academia
- Critical care, neuro-trauma
- Emergency medicine
- Epidemiology and outcomes
- Informatics
- Pediatric infectious diseases

### Residency features:

- Expanded scope of practice, including prescribing under collaborative drug therapy management agreements
- Patient-centered medical home model
- Diverse patient populations
