Legacy LabAlert

June – August 2018

An Important Update from Legacy Laboratory Services

Update 1

Coming Soon: QuantiFERON Gold Plus (QFT Plus)

Due to a vendor mandated change, LLS will adopt a new QuantiFERON Gold methodology that requires a four-tube collection. This is the first of four updates to help prepare you for the transition. Please discontinue use of the QFT kits by Friday, August 17, 2018. Both assays require a 16 hour incubation prior to testing.

QuantiFERON Gold TB (QFT)

QuantiFERON Gold TB Plus (QFT Plus)

Over the next two months, requests for QFT kits will be closely monitored with Friday, August 17th as the target end date for use of this supply. Order quantity may be adjusted based on past utilization history to assure adequate supply availability for all clients.

QFT Plus kits will be available 2 weeks prior to the initial testing date to allow time for clients to order and distribute the new kits for use.

	06.27.18	Update 1: LabAlert announcing change
	07.09.18	Update 2: LabAlert – test overview, specimen requirements
