Legacy Lab Alert
An Important Update from Legacy Laboratory Services

Discontinuing of P2Y12 Inhibitor and Aspirin Testing

Effective December 2, 2019, Legacy Good Samaritan Laboratory will no longer be offering testing for P2Y12 inhibitors (e.g. Clopidogrel, Prasugrel, Ticagrelor) and Aspirin on the VerifyNow System. This change is being made due to very low utilization of the testing.

Due to technical limitations of specimen transport and handling, these tests cannot be referred to an alternate facility. There is currently no alternative testing available for P2Y12 inhibitors as this is a specific drug tested on the analyzer. A Platelet Function Screen (PFA) can be ordered as an alternate to the Platelet Aspirin Test, however, the PFA is not as sensitive and cannot detect levels of baby aspirin in comparison to the VerifyNow System.
