IMMUNOLOGY

Orderable Name	Collected Date/Time	Specimen Type
Coronavirus SARS-CoV-2 by PCR	1/14/2021 02:00 PST	Resp

Procedure	Result	Result Flag	Reference Range	Units	Footnote Symbol
SARS-CoV-2 PCR Interp	DETECTED	ABNORMAL	[NOT DETECTED]		F1
SARS-CoV-2 Specimen	NP Swab				#1

Interpretive Data

#1: SARS-CoV-2 Specimen
Please note that a nasopharyngeal swab remains the specimen of choice for this test. Nasal swabs exhibit lower analytical sensitivity and should only be used in unique clinical situations where an NP swab is not feasible.

Result Comments

F1: SARS-CoV-2 PCR Interp
SARS-CoV-2 Real-Time Qualitative PCR (COVID-19): Detected

This assay is designed for the qualitative detection of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (ORF1/a) and pan-Sarbecovirus (E gene) specific RNA. Amplification of the ORF1/a gene of the SARS-CoV-2 and the E gene of Sarbecovirus results in a positive (detected) test result.

This test has been validated in a CLIA high complexity clinical laboratory, Legacy Laboratory Services, 1225 NE Second Ave, Portland OR. FDA's review of this validation is pending.
